

**CARGO PARK FOR INSTITUTIONS
PROVIDES INTELLIGENT COMMUNICATION SOLUTIONS
KARGOPARK COMMUNICATION CABINETS**

IT FACILITATES THE DOCUMENT MANAGEMENT OF INSTITUTIONS

Kargopark, the first smart cargo locker manufacturer in Turkey, brings a brand new breath with its innovative and different technological products special to companies and the 'Correspondence Locker' solution to the problems of institutions in the internal document delivery processes. . Erdal Özkan, CEO of Kargopark, who stated that they have introduced a document flow model that is recorded and monitored by authorized personnel with 'Chat Cabinets' to these important processes where document circulation between departments is high, confidentiality is important, and the risk of loss and theft creates very high costs, underlines that they will continue to produce innovative solutions for institutions. Dec.

In the 'Communication locker solution', which is defined for each department, a user name and password are defined for users. The official of the relevant department or the communication staff of the institution places the document it receives into the eyes of the relevant department, which it selects from the system, either via a mobile application or via a simple 2-step selection from the screen. An information message is sent to the official of the department in whose name the documents were left via mobile phone and e-mail. With a single step, the department official takes delivery of the documents that come to him through the closet. Confidentiality and correct delivery come to the forefront in this solution. The documents are delivered in a fast and traceable way without getting lost, without getting into the hands of different units and unauthorized persons. The fact that all these steps can be reported instantly from the administrator screens saves time and simplifies the workflow. Erdal Özkan, CEO of Kargopark, who introduced new products for institutions with the mission of 'your documents are safe' ; He notes that the financial damages that will be caused to the company by unauthorized units getting hold of documents that are not delivered on time in institutions with high document circulation or documents with a high degree of confidentiality are completely prevented with the digital solution of the Correspondence cabinet.

In the Communication Cabinet solutions, the institution can offer as many columns as it wants as a 'Cargo delivery solution' for employees to take delivery of their individual cargoes if they wish. Thus, it can find a solution to the problems of employees who suffer victimization because they cannot reach their individual cargoes during working hours or who have to interrupt their meeting or work just to take delivery of cargo with a single product. Erdal Özkan, CEO of Kargopark, who said that they have developed a cargo station where cargo owners can pick up their cargo in institutions if they beg with the Kargopark application, said, "The communication cabinets can be used as a cargo delivery point to

increase the comfort of employees while providing secure and controllable document delivery processes between departments. Dec.

The Entire Flow Is Monitored Via Software

“The Kargopark Communication model, which we can customize by determining the dimensions and colors in accordance with the needs, can be positioned at the desired location. Erdal Özkan said, "User faces designed entirely for the needs can also provide an integrated information flow with the companies' ERP systems. The communication cabinets, which we have developed entirely with domestic software and hardware, lightens the burden of the relevant department, minimizes the required workforce and ensures instant tracking of document delivery processes. The products, which are protected from external factors until the package is received, can be monitored 24/7 with a camera system. Thus, the intensity of Operations that may occur at points such as consultation, communication, security is prevented.” he made statements.

“We Will Continue to Produce Innovative Solutions For Institutions”

Kargopark CEO Erdal Özkan stated that they facilitate the work of all stakeholders of the delivery ecosystem with a sustainable and environmentally friendly approach by targeting the world of tomorrow in all of their innovative solutions and said, “Cost saving, resource management, capital protection and ease of management are the main benefits that a company that can manage cargo and paperwork processes will achieve. The cost of perfecting these processes may be high under normal conditions, but the right innovative solutions are becoming an important helper for the enterprise to achieve success easily. We define an effective cargo management process as ensuring that products are delivered on time and in good condition. In order for these activities to continue smoothly and efficiently, we will continue to produce innovative solutions for institutions.” he made statements.

About Kargopark:

Kargopark is the first smart cargo locker manufacturer in Turkey that changes the game in the delivery system. “Your cargo is here any minute now!” Kargopark, which aims to create a freer world for cargo companies, e-commerce companies, end users and all stakeholders of the delivery ecosystem with its mission, has been developed with domestic software and technology.
